

Wheel clamp (one size fits all)

Made from 16mm solid round bar with 3 mm welded cover plate and two anchor points.

Height: 630mm Width: 590mm

The advantage is having two stabilizing feet which makes the device more secure and easier to fit. If any parts are damaged, the plate or the chain can be replaced making it more sustainable. The chain is not welded to the clamp plate and is 2 metres in length, fitting a small vehicle up to a 7.5 ton lorry.

Plus it can be used for many functions when not in use.
